

NEAX[®] 2400 Power Processor Shelf

Power In.
Power Out.

In order for today's fast-paced businesses to survive, compete and grow, they need the power, versatility and flexibility to adapt to sudden change, particularly in communications. As call patterns, markets and services evolve, technology needs to keep pace — steadily and cost-effectively. Consider the example of the modern PC. Over the years, while housing design has changed little, processing power continues to increase. So, PCs are designed modularly to make the most of these on-demand changes.

Now, consider the case of the PBX. Usually, hardware and software are so unified in design, that at times it seems impossible to increase processing power without the inconvenience of the disruptions associated with forklift upgrades. The cost and effort of such upgrades are prohibitive. This may be true of many PBX systems, but not of the NEAX 2400 communications system. The Power Processor Shelf, a brilliant innovation in modular engineering, makes system processor upgrades a snap. It helps you expand the "brains" of your system, without overhauling the body.

When Change is a Good Thing!

Stability is no longer the key to success in long-term investment protection. Flexibility and adaptability make products viable. Today, the wisest way to protect your communications investment is to make sure it can keep up with technology. NEC's patented, computer-based 32-bit Power Processor Shelf assures the value of long-term system performance through built-in migration engineering. It delivers the muscle you desire today with the flexibility for "plug-in" power tomorrow — what NEC is all about.

Flexibility to Migrate

With the speed that technology zooms ahead, systems that are here today are often gone tomorrow. That's not the case with the NEAX family of voice platforms. Our NEAX migration strategy delivers the continued viability and advanced capability of the NEAX 2400. It represents a cohesive evolution of design and development that keeps our products — and the customers who use them — firmly on the cutting edge.

NEAX 2400

Power Processor Shelf

FEATURES

- Superior speed and power with the 486, Pentium® and future, faster processors
- Enhanced system configurations, capabilities and capacities, as processing power increases
- Open architecture makes upgrades easy and cost efficient
- Designed to adapt to future technology, protecting your PBX investment
- Stackable shelving system for easy on-site configuration

NEAX PRODUCT LIFELINE

Migration Strategy

"Dynamic new technologies intersect at strategic points with existing product life cycle curves, to facilitate timely and economical migration to the next generation technology — creating tools that shape industry trends and respond to changing business demands."

(Note: All specifications are subject to change without notice.)

The NEC Power Processor Shelf is an example of the NEAX Product LifeLine at work. Because of the virtually limitless scalability provided by its ingenious design, the Power Processor Shelf minimizes the loss in initial investment for years and years to come. Your business benefits from leading edge technologies today and tomorrow, with a system that grows along the way. In that sense, the NEAX 2400 could very well be the last communications system you purchase. Go ahead, add it all up. The NEAX 2400 is a completely flexible system which facilitates business, empowers the worker and enhances the customer experience. Plus, it's also remarkably reliable.

Making Obsolescence Obsolete

NEC's innovative and patented new Power Processor Shelf is a modular, stackable, shelf configuration that was designed so that the PC components can be easily pulled out. The shelf detaches from the main cabinet and backplane in minutes. Everything is in clear view and within easy reach.

The Power Processor Shelf's open architecture allows you to quickly change out processor boards or system cards in a breeze, resulting in faster upgrades and migrations with less downtime and minimal expense.

Power for the Long Haul

NEC's Power Processor Shelf is a direct result of the NEAX migration strategy, where the cohesive evolution of existing technologies intersects with the introduction of new technologies to deliver the most advanced communications systems available at any given time. The benefit to you is crystal clear: more long-term bang for your buck.

Experience the power of the NEC Power Processor Shelf and the power that helps you perform.
