

WIRED FOR WIRELESS® Mobility Option

It Pays to Have Connections

Today's fast-paced business climate demands accessibility from everywhere. But how can time-stretched executives ensure they keep the lines of communication open? With NEC's WIRED FOR WIRELESS option, business employees can complete their projects without sacrificing a missed call. With the Dterm® PSIII, many of the features and benefits of the desktop phone are at their fingertips — with all the freedom and mobility of a wireless phone.

Free Enterprise

NEC's Wireless System is cutting-edge wireless technology that packs the power of the NEAX® Communications System in a fully portable, compact solution.

The system uses antennas called Zone Transceivers (ZTs) that are situated throughout the corporate campus to connect calls to wireless phones (Dterm PSIII) no bigger than a candy bar. The result? Your staff can remain connected while benefiting from virtually uninhibited mobility — increasing multi-tasking and improving productivity.

Today's executive operates in a time-constrained world. There's no time to track down elusive people or resources, especially when the customer's on the line. With the Dterm PSIII in hand, your staff is empowered with portable communications that make the difference between getting something done on time and missing an important opportunity. You no longer need to remain at the workstation to get all your work done.

Climbing the Communications Ladder

NEC's WIRED FOR WIRELESS option provides mobile communications throughout the corporate campus, both indoors and outdoors. Busy

employees can choose to wear headsets to allow for even more unencumbered communication. Plus, employees armed with the Dterm PSIII can take advantage of mobile LAN access through modem dialing.

WIRED FOR WIRELESS Mobility Option

It Pays to Have Connections

Stay Mobile — Get That Message

With the NEAX Wireless Short Text Messaging (STM) option, important e-mail or alphanumeric paging messages (up to 128 characters) can be delivered and viewed on the LCD display of each Dterm PSIII handset. No more missing the chance to deliver on that key customer request, and eliminate the inadequate alternative of returning important messages only after returning to the office.

The NEC Wireless System — The Power of Portability

An NEC Wireless system gives employees the advantage of immediate communication so that customers can speak to them directly rather than voice mail. And, in the competitive atmosphere of today's business environments, that means never having to let a missed call turn into a missed opportunity.

Shown actual size

Wireless Station Capacity

Capacities	Max # of Dterm PSIII Handsets	Max # of Zone Transceivers
NEAX 2000 IPS	256	128
NEAX 2400 IPX 4 PIM	4,000	192
NEAX 2400 IPX 16 PIM	4,000	768
NEAX 2400 IPX-U/IPX-UMG	16,000	3,072
